## Profile

Cryptocurrency fanatic, currently working as a Security Engineer at a Cryptocurrency Exchange. I am a Javascript developer for seven years while security researcher for five years contributing to the security of companies like Google, Facebook, Twitter, Uber, Netflix. I write Node.Js code and I've worked extensively on APIs and writing secure Node.JS code.

HackerOne - Dhaval

LinkedIn - dhavalchauhan17

## Experience

### Security Research — 2013-Present

Active participant at Synack and HackerOne along with independent programs such as Facebook, Google. I have reported some critical vulnerability like XML External Entity (XXE) Processing to Paypal, OAuth bypass - [vine.co](#) (Twitter Acq.), while ranking of Top 20 at Facebook Bug Bounty Listing (2014). Top 10 at Yahoo (2013).

CVE-2017-7266 - Netflix's Security Monkey, Open Redirect upon login with Token Extraction.

### Security Engineer, ThroughBit — 2018–Present

ThroughBit is a Cryptocurrency Exchange. I work reviewing the security of the web applications and engine of the exchange.

### Node.JS Developer, MeetWithin — 2017 -2018

Meetwithin is iOS application which helps users finding like-minded people in the locality, I worked as a Node.JS Developer working on APIs.

### Node.JS Developer, Y.A.A.T — 2016 -2017

Yet Another Analytic Tool (Y.A.A.T) is a tool which allows you to analyse the performance of your APIs based on the user action. I was the backend developer working on building Javascript Libraries for the browser as well as packages to be integrated with the backend.

### Full Stack Developer, MyIdealist — 2014 - 2016

MyIdealist is a idea sharing web application which empowers ideation and collaborative feedback loop for refining your idea you came up in the shower. I worked as on PHP for APIs and Javascript for dynamic frontend.
